

Maybank

Business Internet Banking Security Token

Starting from 20th October 2016, to ensure you have a safe and secure Business Internet Banking experience, we are introducing a new 8-digit SMS Transaction Signing Code.

What does this mean to you? Without this 8-digit SMS code, you will not be able to complete selected Business Internet Banking transactions.

You will receive this 8-digit SMS code sent to all the mobile numbers registered with the Bank upon performing selected Business Internet Banking transactions. This 8-digit SMS code needs to be keyed into your New Security Token for the latter to generate a 6-digit One-Time Password, which is required to be keyed onto the Business Internet Banking screen to complete the transaction you performed earlier.

Enhanced Transaction Signing will apply for the following transactions.

- Adding of payees for funds transfers and remittances,
- Funds transfers above S\$50,000,
- Telegraphic transfers above S\$50,000,
- Adding/Editing of employee records and designated company emails
(only applicable to APS+ Payment by Preset Template customers)

To update or register mobile numbers, please submit the [Update of Customer Contacts \(BIB form\)](#).
