Based on illustrated investment rate of return of 3.00% p.a., the total maturity yield will be 2.78% p.a. The two rates, 4.25% per annum and 3.00% per annum, are used purely for illustrative purposes and do not represent the upper and lower limits on the investment performance of the participating fund.

How it works:

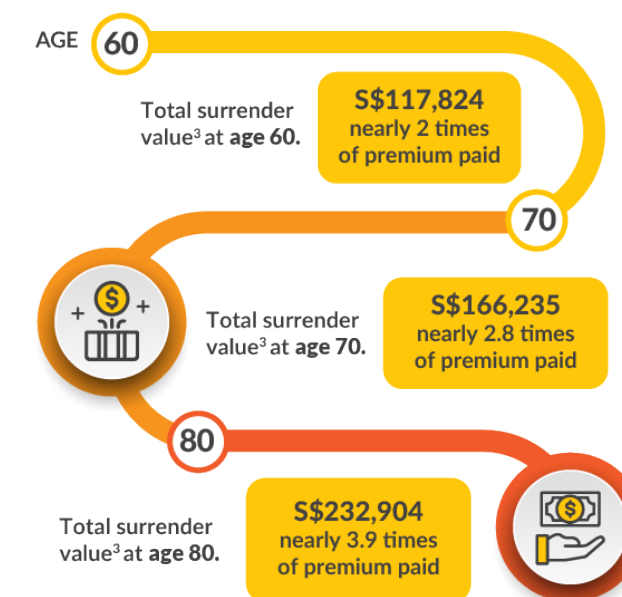

Scenario 1

Angie, a female non-smoker is turning 25 on her next birthday. She saves S\$5,000 annually in **Enrich flex plus** for 20 years.

Scenario 2

Peter, a male non-smoker is turning 30 on his next birthday. He plans to save on a long-term basis and saves S\$3,000 annually in **Enrich flex plus** for 20 years.

The scenario(s) above are for illustration purposes only.

³ The above illustrated values use bonus rates assuming an illustrated investment rate of return of 4.25% per annum. Assuming an illustrated investment rate of return of 3.00% per annum for Scenario 1, the total surrender value at age 60 and 75 is S\$173,580 and S\$249,946 respectively. Assuming an illustrated investment rate of return of 3.00% per annum for Scenario 2, the total surrender value at age 60, 70 and 80 is S\$92,486, S\$117,304 and S\$149,970 respectively. The two rates, 4.25% per annum and 3.00% per annum, are used purely for illustrative purposes and do not represent the upper and lower limits on the investment performance of the participating fund. As the bonus rates are not guaranteed, the actual benefits payable will vary according to the future performance of the participating fund. Past performance or any forecasts are not necessarily indicative of the future or likely performance of the participating fund. Any withdrawal will reduce the long-term value of the policy.
